

HANGAR DOOR PARTS brush weather seals are the perfect solution to gaps in all types of doors! They are commonly used in industrial and hangar doors to provide effective sealing against dust, drafts, moisture, insects, and other environmental elements, as well as contribute to energy efficiency by minimizing heat loss or gain through gaps around the door. Consisting of a flexible strip of densely packed bristles made from nylon or polypropylene, bristles are attached to an aluminum backing strip which can be mounted onto the door frame or the door itself.
